ARGAN OIL

INCI: Argania Spinosa Kernel Oil

Argan oil (also known as Moroccan oil) is derived from the Argania spinosa tree. This tree is known as the healing tree in the region of Morocco where it grows. From its seeds comes an exquisite oil, with excellent nutritive properties that protect and lavish the skin with moisture without having an oily or greasy skin feel. This oil is rich with triterpenoids (skin healing properties), polyphenols (inflammation reduction), tocopherols (anti-aging activity) and two exclusive phytosterols (schottenol and spinasterol) that are ravenous free radical scavengers. Argan oil, however, falls in the middle of the spectrum it's not too heavy, not too lightmaking it perfect to use on all skin types. It's packed with omega fatty acids, vitamin E, and linoleic acids, all of which work to lightly moisturize your skin, soften dry patches, and even reduce acne. "It's essentially nature's protective, nourishing superfood for your skin."

BENEFITS

- Excellent moisturising agent
- Imparts Anti aging properties
- Barrier repair & nourishing
- Dermo purifying properties
- Anti sebum properties
- Nonocclusive
- Plant Derived / Vegetal Based
- Skin Hydration Agent
